HOW TO CHOOSE A COUNTERTOP

1. Consider your needs
Choose your countertops with care. You will use them for many years and they are important for the overall appearance of your kitchen, the impression it gives and how well it works.

Choosing the right material depends on how you use your kitchen in everyday life. If you regularly use the countertops for preparing food, or have children who like to help in the kitchen, laminate or stone countertops make a good choice. These resist moisture and heat. They also last well and are easy to clean.

Countertops in solid wood is a hardwearing material that brings a warm, natural feeling to your kitchen. Wood does not resist heat and scratches as well as laminate or stone, but stains and scratches can be removed with sandpaper and oil.

2. Choose your style
Choose your countertops at the same time as your choose your kitchen doors and drawer fronts. Countertops are an integral part of your kitchen together with other prominent features such as cabinet doors and back-splashes. The choice of countertop adds the final personal touch to your kitchen style.

HOW TO CHOOSE A COUNTERTOP

Durable and easy to keep clean
If you want a countertop that can take tough daily use and at the same time is maintain free - choose a laminated countertop. We test ours to ensure that they can cope with hot pans, as well as shrug off spilled wine, oil and hot drinks. They are even resistant to chemicals, and the smooth, hard surface is easy to keep clean. Even though the countertops are very durable we still recommend that you use a pot stand when you place hot pots directly on them.

• Available in standard lengths in the FYNDIG, PRÄGEL and NUMERÄR series.

COUNTERTOP IN LAMINATE

Best of two worlds
Imagine a countertop with the same look and feel as solid wood, but that’s as easy to care for as laminate. That’s exactly what we’ve done with ÅKERBY countertop. You can cut it to desired length and sand it if it gets scratched or lightly blemished -while it’s also as easy to care for as laminate. All you need to do is treat it with a little wood treatment oil now and then. ÅKERBY countertop is made of particle board covered with a .1 inch top layer of solid wood. This allows us to use less wood for production, which in turn reduces the impact of the environment - while the countertop has the same look and feel as solid wood. That way, you can get a great-looking countertop in wood and make a smart choice for the environment at the same time.
COUNTERTOP IN SOLID WOOD

A living surface
Countertops in solid wood are a hardwearing natural material which gives a warm and natural feeling in the kitchen. It needs to be maintained several times per year with BEHANDLA oil to maintain the quality of the countertop but in return it is a countertop that can easily be renewed by sandpaper the surface. The oil protects the wood from marks, stains and cracks, and prevents water from penetrating the surface and destroying the wood. If the surface looks a little tired and worn after some time, you can give it a real face-lift by sanding and oiling it. It will be like new. Even though the countertops are very durable we still recommend that you use a pot stand when you place hot pots directly on them.

• Available in standard lengths in the NUMERÄR series.

BEHANDLA wood treatment oil. To ensure that your solid wood countertop ages gracefully, treat it regularly with BEHANDLA wood treatment oil; it gives the surface a beautiful sheen, protects the wood and prolongs the life of the countertop. The oil is approved for use on surfaces where food is prepared. A can contains sufficient oil to treat 107.6-129.2 sq.ft.

PRÄGEL COUNTER TOP IN PRE-CUT LENGTHS

Material: Laminate.
Length: 73¾ or 96⅞”.
Depth: 25¾”.
Thickness: 1½”.
Front edge: Rounded.

2 edging strips included. The countertop can be cut to desired length.

HOW TO CHOOSE A SINK AND FAUCET

1. Consider your needs
How will you use your sink? Do you need single or double bowls? Large or small bowls? A large bowl is practical for rinsing large pots. Double bowls are practical when you want to do two things at once, like using one bowl for food preparation and the other for washing. If you wash a lot of dishes by hand, a sink with a drainer can be helpful to keep water off the countertop. Choose a sink with the drainer or bowl to the left or right to suit the space, the way you work and whether you’re right- or left-handed. Most of our sinks can be completed with practical accessories like a chopping board and a rinsing basket. A smart way to free up space and get more room to work on.

To choose the right faucet for your kitchen all depends on your needs and preferences. A single lever faucet makes it easy to control the temperature and flow with one hand. A faucet with high spout is great for washing big pots and oven dishes. Faucets with a high spout with extendable pull out makes rinsing easier too.

2. Choose your style
Sinks with round bowls, square bowls, single bowls or double bowls. In sleek modern stainless steel or in white porcelain for a more traditional, country look. Whatever style you choose we have the faucet to match it. Do you want a faucet that stands out and makes a design statement, or one that blends in subtly with the rest? You can choose between single or dual lever faucets in chrome-plated brass, stainless steel, matt black or white. Our faucets are not only very durable, most also have a built-in function to reduce the water flow, so you save water and do something good for the environment by using them.
Choose from sink units in stainless steel and white porcelain. Sink units in stainless steel have a layer of material on the underside that helps to absorb and reduce sound. Many of our sinks are reversible - so you can position your sink to suit the workflow of your kitchen. Stainless steel sinks do not have predrilled holes, which gives you the chance to choose where you want your faucet. You can use FIXA 2-piece tool kit to make the hole.

**FYNDIG, BREDSKÄR and BOHOLMEN sinks are designed to be inset into the countertop. This requires cutting out a hole in the countertop. Follow the instructions supplied for sawing and installation. The sinks are set into the countertop and secured in place using the special clamp fittings supplied.**
